1 Original graph G0
Find reference length L0*
Set D0 = (1 + detour) L0*
Clip the OD corridor
2 Feature graph Gf
Align and sample rasters
Remove missing-UTCI edges
Assign heat and shade costs
3 Route search
Select an objective variant
Search under Df in old run
Apply compute caps/fallback
4 Audit and report
Accept only length <= D0
Match shortest baseline
Report exposure and runtime
